FAKTOR – FAKTOR YANG BERHUBUNGAN DENGAN KEPATUHAN PEMERIKSAAN *TRIPLE ELIMINASI* DI PUSKESMAS BALEENDAH TAHUN 2024

Tri Octafila Sany 1053231025

ABSTRAK

Tujuan Penelitian adalah untuk mengetahui dan menganalisis faktor- faktor yang berhubungan dengan kepatuhan pemeriksaan *Triple eliminasi* pada ibu hamil di Puskesmas Baleendah tahun 2024. Penelitian ini menggunakan rancangan penelitian kuantitatif dengan pendekatan *cross sectional*. Sampel sebanyak 60 orang dengan teknik *purposive sampling*. Pengambilan data dengan kuesioner. Analisis data menggunakan uji *Chi Square*. Hasil penelitian ini 61,7 % ibu hamil tidak patuh dalam pemeriksaan *Triple Eliminasi*. Tidak terdapat hubungan antara usia (p-value 0,809), terdapat hubungan antara pendidikan ibu (p-value 0,000), tidak terdapat hubungan pekerjaan ibu (p-value 0,098), tidak terdapat hubungan pekerjaan suami (p-value 0,257), terdapat hubungan dukungan suami/keluarga (p-value 0,039), terdapat hubungan dukungana tenaga kesehatan (p-value 0,042), terdapat hubungan pengetahuan (p-value 0,000) dengan kepatuhan pemeriksaan *Triple Eliminasi*. Disimpulkan Tidak terdapat hubungan antara usia, pekerjaan ibu, pekerjaan suami dengan kepatuhan pemeriksaan triple eliminasi pada ibu hamil dan terdapat hubungan antara pendidikan, dukungan suami/keluarga, dukungan tenaga kesehatan, pengetahuan dengan kepatuhan pemeriksaan *triple eliminasi*. Jumlah daftar pustaka 42, tahun 2014-2024.

Kata kunci : faktor-faktor, ibu hamil, kepatuhan, *triple eliminasi*.

ABSTRACT

The purpose of this study was to determine and analyze factors related to compliance with Triple Elimination examinations in pregnant women at the Baleendah Health Center in 2024. This study used a quantitative research design with a cross-sectional approach. A sample of 60 people with a purposive sampling technique. Data collection using a questionnaire. Data analysis using the Chi Square test. The results of this study were 61.7% of pregnant women were not compliant with the Triple Elimination examination. There was no relationship between age (p-value 0.809), there was a relationship between maternal education (p-value 0.000), there was no relationship between maternal employment (p-value 0.098), there was no relationship between husband's employment (p-value 0.257), there was a relationship between husband/family support (p-value 0.039), there was a relationship between health worker support (p-value 0.042), there was a relationship between knowledge (p-value 0.000) and compliance with the Triple Elimination examination. It was concluded that there was no relationship between age, mother's occupation, husband's occupation with triple elimination examination compliance in pregnant women and there was a relationship between education, husband/family support, health worker support, knowledge with triple elimination examination compliance. The number of references is 42, 2014-2024.

Keywords: *factors, pregnant women, compliance, triple elimination.*
