**HUBUNGAN DUKUNGAN SUAMI DAN PENGETAHUAN IBU
TERHADAP PEMILIHAN METODE KONTRASEPSI IUD
(INTRAUTERINE DEVICE) DI TPMB R
KOTA BANDUNG
TAHUN 2024**

ASMANAH 1053231015

ABSTRAK

Pendahuluan: Dalam upaya menurunkan AKI dapat dilakukan dengan adanya penguatan pilar *safe motherhood*, dimana pilar pertamanya adalah pelayanan kontrasepsi dan keluarga berencana. Penggunaan kontrasepsi IUD (*Intrauterine Device*) di Kota mencapai 44,84% (SKI, 2023). Faktor yang mempengaruhi penggunaan kontrasepsi antara lain faktor predisposisi (pengetahuan, sikap, dan unsur-unsur lain yang ada didalam individu), faktor pendukung yaitu tersedianya sarana kesehatan dan faktor penguat seperti informasi oleh petugas lapangan KB dan dukungan suami.

Tujuan: Untuk menganalisis hubungan dukungan suami dan tingkat pengetahuan terhadap pemilihan metode kontrasepsi IUD di TPMB R Kota Bandung.

Metodologi: Rancangan penelitian kuantitatif dengan menggunakan desain penelitian *cross sectional*. Sampel dari penelitian ini berjumlah 30 responden yang merupakan Pasangan Usia Subur yang datang ke TPMB R Kota Bandung untuk kunjungan ulang dan atau calon akseptor KB baru. Analisis menggunakan univariat dan bivariat menggunakan uji *Chi Square*.

Hasil: Dari 30 responden terdapat 16 responden (53,5%) memilih kontrasepsi IUD (*Intrauterine Device*), 17 akseptor (56.7%) mendapat dukungan suami (p-value 0,000), terdapat 22 responden (73,3%) responden dengan pengetahuan baik sebanyak (p-value 0,008) di TPMB R Kota Bandung.

Simpulan: Terdapat 17 akseptor mendapat dukungan suami, terdapat 22 responden dengan pengetahuan baik, ada hubungan dukungan suami dan pengetahuan ibu terhadap pemilihan metode kontrasepsi IUD.

THE RELATIONSHIP BETWEEN HUSBAND SUPPORT AND MOTHER'S KNOWLEDGE ON THE SELECTION OF IUD (INTRAUTERINE DEVICE) CONTRACEPTIVE METHOD AT TPMB R BANDUNG CITY IN 2024

ASMANAH 1053231015

ABSTRAC

Introduction: In an effort to reduce AKI can be done by strengthening the safe motherhood pillar, where the first pillar is contraceptive services and family planning. The use of IUD (Intrauterine Device) contraceptives in the city reaches 44.84% (SKI, 2023). Factors that affect the use of contraception include predisposition factors (knowledge, attitudes, and other elements in the individual), supporting factors, namely the availability of health facilities and reinforcing factors such as information by family planning field officers and husband support.

Objective: To analyze the relationship between husband support and the level of knowledge on the selection of IUD contraceptive method in TPMB R Bandung City.

Methodology: Quantitative research design using a cross sectional research design. The sample from this study amounted to 30 respondents who were Couples of Childbearing Age who came to TPMB R Bandung City for a revisit and/or prospective new family planning acceptors. The analysis used univariate and bivariate using the Chi Square test.

Results: Of the 30 respondents, 16 respondents (53.5%) chose IUD (Intrauterine Device) contraception, 17 acceptors (56.7%) received the support of their husbands (p -value 0.000), there were 22 respondents (73.3%) respondents with good knowledge (p -value 0.008) at TPMB R Bandung City.

Conclusion: There were 17 acceptors with the support of their husbands, there were 22 respondents with good knowledge, there was a relationship between the support of the husband and the mother's knowledge of the choice of IUD contraceptive method.
