Judul : Relationship between the role of father and the independence of toddlers in the TPA Shobabah Pejaten Timur

Background: Fathers have an important role in the growth and development of the children from an early age. but many fathers are not involved in parenting and there are still few fathers who have an attachment relationship with their children.

Objective: To determine the relationship between the role of fathers and the independence of toddlers at Preschool muslim Shobabah Pejaten Timur.

Method: This study uses a quantitative approach with a Cross Sectional design that studies the relationship between the role of fathers and the independence of toddlers at TPA Shobabah Pejaten Timur and is carried out by filling out a questionnaire using a questionnaire to 70 father respondents at Preschool Muslim Shobabah Pejaten Timur.

Results: Of the 70 respondents, most of the characteristics of fathers based on the age of respondents are early adults 26-35 years old, namely 57 people (81.4%). With respondents working as many as (87.1%). With a high level of education as many as 49 people (70%). And most of the characteristics of toddlers based on preschool age 3-5 years as many as 39 people (55.7%). With female gender as many as 45 people (64.3%). Nutritional status with normal weight or as many as 38 people (54.3%). The results of this study indicate that there is a significant relationship between fathers and the independence of toddlers using the chi-square statistical test obtained p-value ($\alpha < 0.05$).

Conclusion: The result of this research can be a hope for children's development with the need for the father's role in achieving conformity, especially in achieving children's independence without help others.
