ABSTRAK

Posyandu memiliki peran penting dalam pemantauan tumbuh kembang anak pada masa *golden age*. Penelitian ini bertujuan untuk mengetahui faktor-faktor yang berhubungan dengan kehadiran balita di posyandu. Penelitian ini menggunakan desain kuantitatif dengan pendekatan *cross sectional*. Sampel penelitian berjumlah 90 responden yang diambil dengan metode *total sampling*. Variabel independen meliputi dukungan keluarga, pekerjaan ibu, pendidikan ibu, tingkat kepuasan ibu terhadap posyandu, dan pengetahuan ibu tentang pentingnya ke posyandu, sedangkan variabel dependen adalah kehadiran balita. Instrumen penelitian berupa kuesioner yang mencakup data identitas, karakteristik responden, serta pertanyaan mengenai dukungan, tingkat kepuasan, dan pengetahuan. Analisis data dilakukan melalui uji *Chi-square*. Hasil penelitian menunjukkan sebagian besar responden di Posyandu Garuda 3C Halim Perdanakusuma memiliki status kehadiran balita yang aktif (70.0%), ibu tidak bekerja (55.6%), berpendidikan tinggi (80.0%), memiliki pengetahuan yang cukup (68.9%), merasa puas dengan pelayanan posyandu (68.9%), dan dukungan keluarga yang baik (78.9%). Hasil penelitian juga menunjukkan bahwa terdapat hubungan yang signifikan antara dukungan keluarga dengan kehadiran balita ($p\text{ value} < 0.001$). Tidak ada hubungan antara pekerjaan ibu ($p\text{ value} = 0.249$), pendidikan ibu ($p\text{ value} = 0.954$), pengetahuan ibu tentang pentingnya ke posyandu ($p\text{ value} = 0.222$), dan tingkat kepuasan ibu terhadap posyandu ($p\text{ value} = 0.123$) dengan kehadiran balita. Diharapkan hasil penelitian ini dapat menjadi masukan bagi kader posyandu mengenai pelayanan kader terhadap penerimaan kepada ibu balita yang datang ke posyandu.

ABSTRACT

Posyandu plays an important role in monitoring child growth and development during the golden age period. This study aims to determine the factors related to the presence of toddlers at posyandu. A quantitative design with a cross-sectional approach was applied. This study sampel consisted of 90 respondents selected using a total sampling method. Independent variables included family support, maternal occupation, maternal education, maternal satisfaction of posyandu services, and maternal knowledge about the importance of posyandu, while the dependent variable was toddler attendance. The research instrument was a questionnaire covering demographic data, respondent characteristics, as well as questions regarding support, satisfaction, and knowledge. Data were analyzed using the Chi-square test. The result showed that most respondents at Posyandu Garuda 3C Halim Perdanakusuma has an active presence status of toddlers (70.0%), non-working mothers (55.6%), highly educated (80.0%), have sufficient knowledge (68.9%), feel satisfied with posyandu services (68.9%), and good family support (78.9%). The results of the study also showed that there was a significant relationship between family support and the presence of toddlers (p value <0.001). There was no relationship between mother's work (p value = 0.249), mother's education (p value = 0.954), mother's knowledge about the importance of posyandu (p value = 0.222), and the level of maternal satisfaction with posyandu (p value = 0.123) with the presence of toddlers. It is hoped that the results of this research can be an input for posyandu cadres regarding cadre services for the acceptance of mothers under five who come to the posyandu.
